

Status update Visio team 1

Spring framework

We have a Maven project running with the Spring & Hibernate libraries deployed.

We are currently working on trying to create a simple database connection with Hibernate but we are running into some errors. After we have solved those errors we will start creating a simple login page for our panel.

We currently do not have issues that we cannot solve (so far).

Process Deliverables

- The cooperation agreement is done
- All team members have written down their learning goals in SMART format.
- Not all team members have given each other feedback by using the feedback forms yet.

Our aim is to have this done by the end of the week.

Confidence level of successfully delivering the product to the client

We think that the chance that we deliver a product to the client in Sprint 2: 70%
